# ABOUT US

QuantSoc is a uniquely positioned student society at UNSW that aims to focus on quantitative finance but one that chooses to indulge on competitive events and educational workshops. We believe that while interest and knowledge in the industry is necessary for any student pursuing quant it is important to facilitate an environment for students to compete and learn in to truly excel in any field. We aim to create a competitive but engaging environment for students to learn about the quantitative finance industry and beyond.

We acknowledge the challenges and intense resource commitments our industry partners face in recruiting top tier talent. To address this, our mock interview sessions and industry speaker series aim to streamline the recruitment and interview process, reducing the mismatch in priorities between candidate beliefs and industry expectations. In essence, our mission is to cultivate our members into adept communicators, collaborators, and critical thinkers armed with the quantitative skills needed to tackle contemporary industry challenges.

Our collaborative events and networking nights not only offer students with invaluable networking opportunities but also serve as a pivotal channel for industry partners to connect with enthusiastic and prepared students for internships and graduate opportunities.

Competitive events such as poker, trivia and mock trading are all staples of QuantSoc's competition portfolio, we believe these events serve as a fun and engaging way to introduce students to new concepts and to experiment with fundamental ideas in a competitive environment to facilitate learning.

Our aim is to initiate students into the world of trading and market-making, fostering a community of passionate problem solvers and bold strategic thinkers. We aspire to instill a collaborative, competitive, and quantitative approach to problem-solving, emphasising comprehension not just of the 'how' but also the 'why' - ultimately inspiring a paradigm shift!

## Further Website Improvements

Current goals for 2025 is to improve the QuantSoc website, current projects are:

- Integrating games and logic puzzles into the website
- Integrating QuantSoc newsletter into website
- Improving events hosting and advertising

## Further Media Exploration

We aim in 2025 to create society merchandise for members to improve student engagement, additionally creation of short form content centered on problem solving and puzzles is currently being explored by our education and media portfolio.

# OUR PROGRESS & IMPACTS

## People in QuantSoc

Peter Boylan

2023 Competition Director

2024 QuantSoc President

**Trading Intern @ Jane Street  
and Citadel Securities**

When I first attended a QuantSoc event at the start of 2022, I was still trying to find a job that resonated with my STEM background and passion for problem-solving. Not only did I encounter people actively shaping a brighter career and future for themselves, but I also noticed them enjoying the process. It felt like a natural progression for me to immerse myself in the world of trading and explore where this journey might lead.

Sponsored events played a pivotal role in guiding my application journey. By attending these events and engaging with company representatives, I not only gained insight into QuantSoc but also developed a broader appreciation for the profession in general. I learned about the core values embraced by different companies and the qualities they sought in prospective employees. Moreover, it allowed me to connect with potential future colleagues and build personal connections which might aid with a seamless transition into a permanent position within the industry.

# OUR PROGRESS & IMPACTS

## People in QuantSoc

2022 Education Director  
2023 QuantSoc Secretary

**Semi-Systematic Trading  
Intern @ Citadel Securities**

QuantSoc played a big role in my decision to enter quantitative finance. What most struck me over the course of this year was how incredibly smart yet humble and down to earth the people around me were. This atmosphere made it so easy to make friends and connect with people passionate about STEM and quantitative finance.

It was after hearing the experiences of people who had worked in quant that I realized how exciting and interesting a field it was. Technical workshops introduced knowledge outside the university curriculum, showing me that quant was an ideal career for my STEM background. QuantSoc's sponsored events gave me a better understanding of each company's culture. I was surprised when I found out that each company has quite a distinct culture, model of operations, and talent requirements. Being able to hear from recruiters and professionals about the culture, values, and required skills of each company gave me valuable information about which companies might have the best use for my skills.
